EXPERIENCE

AI & Full-Stack Engineer Intern, CFEES, DRDO, Delhi

Jun 2026 – Sep 2026

React, Express, PostgreSQL, Supabase, Ollama, JavaScript

- Sole developer of an inventory and approval system replacing a paper process that took days to weeks, for 500+ staff and 10,000+ assets.
- Built it for DRDO's air-gapped intranet, moving the backend off Supabase to local PostgreSQL + Express.
- Kept it portable: the same backend still runs on Supabase by changing one connection string.
- Enforced access control with PostgreSQL row-level security across 3 roles, tested against cross-group reads, replays and forged sessions.
- Built an offline AI assistant on a locally hosted open-source model (Ollama), with no external API calls.

Data Analyst Intern, Delite Kom Ltd, New Delhi

Aug 2025 – Jan 2026

Python (Pandas, NumPy), SQL, Power BI, Excel (Power Query), Git/GitHub

- Built three predictive models (customer churn, segmentation, and demand forecasting) and integrated them into business reporting.
- Built incremental ETL pipelines with staging layers and slowly changing dimensions to preserve historical data.
- Wrote Python validation scripts and generalized them into reusable data-integrity frameworks, replacing manual QA.
- Optimized SQL queries and refresh logic via execution plans, join order, indexing, and aggregate tables.
- Delivered Power BI dashboards used daily by Sales, Operations, and Finance, with row-level security and drill-through.

AI Model Contributor, Outlier AI

Feb 2024 – Mar 2025

- Wrote and evaluated GPT training data (200+ samples and 500+ output evaluations a month), contributing to ~18% accuracy gains.
- Delivered quality ratings in the top 10% of contributors, directly informing iterative fine-tuning cycles.

PROJECTS

Python to Rust & C++ Translator | *Python, Rust, C++, Gradio, Docker, Hugging Face Spaces*

- An LLM rewrites a Python program in Rust or C++, then compiles and runs both, comparing output to prove the translation is correct.
- 61–73x measured speedups with byte-identical output; untrusted code runs sandboxed with resource limits.

Product Price Prediction: Fine-tuned vs Frontier LLMs | *PyTorch, QLoRA/PEFT, Hugging Face, OpenAI API*

- Predicts a product's price from its description, comparing fine-tuned, frontier and from-scratch models.
- Fine-tuned Llama 3.2 3B (4-bit QLoRA) to \$39.85 mean error, beating GPT-5.1 (\$44.74), Claude Sonnet 4.5 (\$47.10) and Gemini 3 Pro.
- Also fine-tuned GPT-4.1 nano (\$75.91) before OpenAI closed self-serve fine-tuning in May 2026.
- Matched that result (\$38.61) on a 16 GB RTX 5070 Ti by fitting training built for an 80 GB A100 into 16 GB.
- Separately, a 289M-parameter network trained from scratch beat prompted GPT-4.1 nano by 27%.

RAG-Powered AI Knowledge Worker | *Python, Chroma, ONNX embeddings, Streamlit, Groq*

- Answers questions over 76 company documents and shows the sources behind every answer.
- Benchmarked on 150 questions (MRR 0.905); query rewriting + re-ranking let free local embeddings match OpenAI's paid ones, 5x faster.

Autonomous Multi-Agent Bargain Spotter | *Python, OpenAI tool calling, Claude, Modal, ChromaDB, Gradio*

- Autonomous system that scans online deal feeds every 5 minutes, estimates each product's true value and push-notifies the best bargain.
- A GPT-5.1 planner calls tools to run 6 agents: a deal scanner, 3 pricing models, an ensemble and a notifier.
- The pricing ensemble (RAG + fine-tuned Llama served on Modal + neural net) cut error to \$29.90, beating GPT-5.1 alone (\$44.74).

Also built: more projects across web, mobile and data. Code and live demos: github.com/Yugjohri

TECHNICAL SKILLS

AI & GenAI: RAG, LangChain, Multi-Agent Systems, OpenAI API, Prompt Engineering, QLoRA, FAISS, ChromaDB, Ollama

ML & Models: PyTorch, Transformers, Fine-tuning, Quantization (4-bit/8-bit), Hugging Face, CNNs, Predictive Modeling, LLM Evaluation

Data & Analytics: Pandas, NumPy, SQL, Power BI, ETL Pipelines, Power Query, Data Validation, Churn & Demand Forecasting

Engineering: Python, Java, C++, JavaScript, React, Express, PostgreSQL, Supabase, Authentication & RBAC, REST APIs

Tools & Other: Git, Docker, Gradio, Streamlit, Hugging Face Spaces, Unreal Engine, Excel & Google Sheets, Software Design & Testing

EDUCATION

Bennett University

Aug 2022 – Aug 2026

B.Tech in Computer Science Engineering | CGPA: 8.0 | Greater Noida, India

ACHIEVEMENTS & RESPONSIBILITIES

- 2nd Place, SEAS Ideathon 3.0 at Bennett University.
- Technical Head, ACM Student Club: Revamped the entire ACM website end-to-end.
- Head of Development, Solace Studios: Led a team to ship a collaborative group project game.
- Multimedia Head, International Affairs Society: Managed communications and experience for international delegates.

ADDITIONAL

Languages: English (Highly Proficient), Hindi (Native), ASL (Learning)

Hobbies: Badminton (District player), Martial Arts, Calisthenics, Guitar, Reading
